

Kartikeya Shivankar

+91 9356635146 — kartikshivankar12@gmail.com — LinkedIn — GitHub

Summary

Electronics and Telecommunication Engineering student with hands-on experience in embedded systems and web development. Skilled in Arduino Uno, ESP32, HTML, CSS, JavaScript, C, C++, and Python, with practical experience in designing IoT and automation projects. Strong foundation in Data Structures and Algorithms, along with experience building responsive web applications and hardware-integrated solutions. Freelance video editor with client-based project experience, combining technical expertise, creativity, and problem-solving to develop practical, user-focused solutions.

Education

Bachelor of Technology (B.Tech) – Electronics and Telecommunication Engineering 2024 – 2028

St. Vincent Pallotti College of Engineering & Technology

Skills

- **Technical Skills:** HTML, CSS, JavaScript, C, C++, Python, Machine Learning
- **Software & Tools:** Canva, Figma, GitHub, MS Office, Power BI, Tableau, Antigravity, Multisim, Wokwi, CapCut
- **Databases:** SQL
- **Hardware:** Arduino UNO, ESP32 Microcontroller

Projects

CarbonChain – Blockchain-Based Blue Carbon Registry, MRV Platform

Built a secure carbon credit management system using blockchain, smart contracts, and AI-assisted verification to enable transparent carbon credit issuance, tracking, and marketplace trading.

UnifiedDesk – Unified Service Management Portal

Developed a Unified Service Management Portal with role-based access, request lifecycle tracking, dashboard analytics, and service request management to streamline operations and improve transparency.

BusMonitoring – Bus Crowd Detection System

Developed an ESP32-based passenger counting system using dual IR sensors to detect entry and exit movements. Implemented real-time occupancy monitoring, bus capacity alerts, LCD display, anti-false-counting logic, and a live dashboard for crowd management.

SmartLED – Automatic LEDs Controller

Developed a web-based LED control system that enables users to remotely switch multiple colored LEDs ON/OFF through an interactive interface. Integrated frontend controls with hardware communication to provide real-time LED status management and remote device control.

Certifications / Achievements

- Central India Hackathon at SCOET
- Google Developer Group Hackathon at JDCOEM
- Abhyudaya Hackathon at IIIT
- Introduction to Cyber Security

- Python Using AI
- Embedded System Virtual Internship (Eduskills)

Additional Information

- **Soft Skills:** Communication, Time Management, Problem Solving, Adaptability, Creativity, Team-work
- **Languages:** English, Hindi, Marathi
